## PERSONAL PROJECTS

**DevKt** <https://github.com/ice1000/dev-kt>  
Cross-platform lightweight code editor / Kotlin IDE

- Built-in Java/Kotlin highlights and completion, that can support other languages via plugins (transplantable from JetBrains IDE's). Has extra build & run support for Kotlin.
- Flexible architecture, decoupled high-level logic with UI, migration to other UI frameworks is easy.
- Provides fine-grained highlight color and keymap settings, supports hot reload.

**Voile** <https://github.com/owo-lang/voile-rs>  
Experimental dependently-typed programming language with row-polymorphism

- Supports dependent types, meta variable unification, and non-dependent row-polymorphic record and variant.
- Supports cumulative universe levels and uses a universe lifting operation to get rid of Set $\omega$ .
- Implements CLI parser/source code parser and interactive REPL with the help of Rust language's ecosystem.

**IntelliJ Pest** <https://github.com/pest-parser/intellij-pest>  
Experimental dependently-typed programming language with row-polymorphism

- Semantic-based highlighting, completion, navigation, definition extraction/inlining, and Rust plugin integration.
- Provides live preview – test grammar files by dynamically highlighting user code according to the grammar.
- Supports exporting the highlighted user code to HTML format.
